Mean 9.634; Variance 6 948; scale 1.386

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

ALIGNMENTS

New isolated integrin-linked serine/threonine kinase - used to develop products to modulate oul growth, adhesion, migration and invasion, e.g. for treating cancer or inflammation

Invasion, e.g. for treating cancer or inflammation

Sclaim 3: Fig las Gipp: English.

Colaim 3: Fi 19-SEP-1997 (first entry)

Human integrin-linked kinase (ILK) cDNA.

Integrin-linked kinase, ILK; serine/threcoine kinase; cell growth; cell adhesion; cell migration; cell invasion, inhibitor; gene therapy, diagnostis; carcer; leuka-mia, t.m..r, inflammation; arthritis; osteporosis; cardiovascular disease; ss.

Disclosure, p. English.

English were introduced into the alpha fragment of Endom point mutations were introduced into the alpha fragment of E.coli beta-galactosidase. The wild type sequence was obtained as a single stranded template and an oligonucleotide was hybridised to it to generate a popn of DNA molecules which terminate at all possible nucleotide positions within a specified at all to variable 3 ends generated in this way are used as primers for variable 3 ends generated in this way are used as primers for the reperse transcriptase. Nucleotides are misincorporated by the amplified and then expressed in a suitable host-vector system. The sequence covers all 176 difft base substitutions, most of which cocurred singularly in any given mutant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           90 tthhyrrmrbnvyrdynrsdaaawyccyrrsvkydccynachhddhyvybbbvynvhnhn 149

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Uligonuclectide probe MX14-A consists of nucleotides 5-95 of MX14 (051735). It hybridized to all spp. of mycobacteria tested, but cross reacted to a few non-mycobacterial spp. The probe may be useful as an initial screen for mycobacterial infection. See also 051735-45 and 051747-59.

The wild type sequence was obtained as a single stranded template and an oligonucleotide was hybridised to it to generate a popn of DNA molecules which terminate at all possible nucleotide positions within a specified region. The reverse transcriptase. Nucleotides are misincorporated by the transcriptase and the molecules are completed to forms that can be amplified and them expressed in a suitable host-vector system. The sequence covers all 176 difft hase substitutions, most of which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Base substituted E.coli beta-galactosidase alpha-fragment.
E.coli beta galactosidase alpha-fragment; base substitutions: ss.
Escherichia coli.

It hybridized to all spp. of myochacteria tested cross reacted to a few non-mycobacterial spp. The probe may be useful as an initial screen for mycobacterial infection see also 051735-45 and 051747-59.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      7 ggcgssvhsyyvvhrvshhhsuhhuhuhuhunhuuhuuhhuhuhhuhyhuyu 59

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       deliver a chemically or biologically active moiety, eg. metal ion, radioisotope, peptide, toxin or enzyme, to the specific target or on the cell. They can also replace the function of macromolecules, eg. mannershade or polychosal antibodies and therefore diremment the need for complex methods of hybridoma formation or in vivo antibody production. The TSARs are easily characterised and have designed activity allowing direct and rapid detection in a screening process.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         receiver some degree of conformational rigidity to the peptides. The TSAKs of company comprising a TSAR binding domain can be used in vivo to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      that the expressed peptide mentains 2 or 4 systeine residers positioned in, or flanking, the unpredicted or variant residues. ```
other specific peptides generated by these generic sequences are shown in P6K191-54. TSAPs are concatenated beternfunctional proteins or peptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    or compans, comprising a ISAE binding demain can be used in vivo to deliver a chemically or biologically active modety, eq. metal ion, radicisotope, peptide, texin or enzyme, to the specific target or on the est. They can also replace the function of macromolecules, eq.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        that the expressed peptide contains 2 or 4 cystoine residues positioned in, or flanking, the apprehisted or variant residues. These residues confer some degree of conformational rigidity to the paptides. The TSARS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       that are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                examprising at least two functional regions of binding domain with affinity for a ligad and a second effector popular portion that its shadically or bichograffy and the flow one further overgive a ligher peptide between the 2 domains.The oligenuc/colides are also designed so
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Identifying proteins or peetide(s) which bind a Bluand - by screening a recombinant vector library expression lusion proteins comprisating a binding domain and an effector domain.

Pisclosure, Page 35: 255pp. Endlish.

V70465 is a generic DNA sequence used to generate random TSAR (Totally Synthetr Affinity fempents) peptides. This deneric formila can also be represented as follows. X(NNH)6(TGC)(NNH)112(NNH)14(TGC)(NNH)3 Y and Y are fearly in restriction sites (X is not the came as Y) that are not securify and faither other generic sequences are shown in V70465-68.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     astibulies and thorotoro circumvent the need
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Generic INA sequence to demente a random TSAR portide library.
TSAR; totally synthetic affinity readent; synthetic; binding domain;
effector domain; concatemented heterotunctional professor linker;
direct; rapid; detection, screening, treatment; generic; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     activity allowing direct and rapid detection in a serecoing process.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     mentarismas or polygonal antibulies and therefore circumment the
for complex methods of hybridoma formation or in vivo antibody
production. The ISAEs are easily characterised and have designed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         222 CACGGAGAACGACTICACOA VERROCACA PARENCA PERCENTEGRAS 273

referring a recombinant vector library expressing fusion proteins or peptide(s) which bind a ligand - by screening a recombinant vector library expressing fusion proteins comprising a binding domain and an effector domain bischosure; Page 35; 255pp; English and an effector domain bischosure; Page 35; 255pp; English and an effector and TSAP (Totally Synthetic Affility Posquence used this generate random TSAP (Totally Synthetic Affility Posquence used this generated as follows: X(NNB) LITGC)(NNB)66(NNB)7 (15C)(NNB)10Y. X and Y are flanking restriction sites (X is not the same as Y) that are not specified further. Other generated by these generic sequences are shown in C70466-68.

Cother specific peptides generated by these generic sequences are shown in R65151-54. TSARs are concatenated helecofunctional proteins or peptides, comprising at least two functional regions - a binding domain with affinity for a ligand and a second effector peptide portion that is chemically or biologically active They may further comprise a linker period between the 2 domains the oligonucletides are also desirred so
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             that the expressed populations is not described and also designed of in, or flanking, the unpredicted or variant residues. These residues on for some degree of conformational rigidity to the peptides. The ISARs or compens. Comprising a ISAR binding domain can be used in vivo to deliver a chemically or biologically active moicty, eq. metal ion, radioisotope, peptide, toxin or enzyme, it the specific inraging to the monoclonal or polyclonal artibodies and therefore circumvent the need for complex methods of hybridoma formation or in vivo unlibody production. The ISARs are easily characterised and have designed activity allowing direct and reapid detection in a screening process.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Generic DNA sequence to generate a randem TSAP peride library. TSAP, totally synthetic affinity reagent, synthetic, binding domain; effector domain; concatenated heterofunctional protein; linker; direct; rapid; detection; screening; treatment; generic; ss

Scribbally proteins or peptide(s) which bind a ligand - by screening a recombinant vector library expressing fusion proteins remember a recombinant vector library expressing fusion proteins of computational by 25 per per section of the protein proteins of the protein plant and an effector domain specification by 25 25 per per section 25 perides. This generic formula can also be represented as follows: X(NNB) EG(NS) 12 (NNB) EG(NS) 12 (NNB) EG(NS) 12 perides as follows: X(NNB) EG(NS) 12 (NNB) EG(NS) 12 (NNB) EG(NS) 12 (NNB) EG(NS) 13 per the same as Y) that are not specified further observed by those generic sequences are shown in period further concatenated between the sequences are shown in period further concatenated between the sequences are shown in period at least two functional regions - a binding domain with a fiftinty for a ligand and a second effector peptide portion that is committed by the superiod proteins or peptide sequences are also designed in a figure of contains 2 or 4 dysteine residues positioned in or finishing, the unpredicted or variant residues positioned in or compens. Generally or binding domain can be used in vivo to deliver a chemically or binding domain can be used in vivo to deliver a chemically or binding domain can be used in vivo to deliver a chemically or binding domain can be used in vivo to deliver a chemically or binding domain can be used in vivo to the components of the contains and cont
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Tradioisotope, peptide toxin or enzyme, to the specific target or on the real They can also replace the function of marromolecules egan monoclonal or polychonal antibodies and therefore circumvent the need for complex methods of hybridoma formation or in vivo antibody production. The ISARs are easily characterised and have designed activity allowing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 132 GGGGACICGGGGGCGGGGGGCGCIGCIAIGGACGACAIIIICACICAGIGCCGGGAGGGCAA 191

Synthetic Affinity Reagents) peptides. This generic formula can also be represented as follows: X(NNB)6(TGC)(NNB)11Z(NNB)14(TGC)(NNB)3Y. X and y are flanking restriction sites X is not the same as Y) that are not specified further other generic sequences are shown in 70466-68 other specified further other generic sequences are shown in 70466-68 other specified peptides generated beterofunctional proteins or peptides, comprising at least two functional regions - a binding domain with a figurative for a ligand and a second effector peptide portion that is chemically or biologically active. They may further comprise a linker peptide between the 2 domains. They may further comprise a linker peptide between the 2 domains. They may further comprise a linker peptide between the 2 domains. They may further comprise a linker peptide between the 2 domains. They may further comprise a linker peptide between the 2 domains. They may further comprise a linker peptide between the 2 domains. They may further comprise a linker confer some degree of conformational rigidity to the peptides. There residues confer some degree of conformational rigidity to the peptides. The TSARs of a composing an also replace the function of macromolecules, egg.

Celliver a chemically or biologically active moiety, eg. metal ion, monoclonal or polyclonal antibodies and therefore circumvent the need for complex methods of hybridoma formation or in vivo antibody activity allowing direct and antibodies and have designed activity allowing direct and rapid detection in a screening process squence 114 BF: 0 A; 2 C; 2 C;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ymphocyte, amplification, primer, polymerase chain reaction, PCR, ds
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ÎO-MAR-1994 (first entry)
pIK gene LpIK4 partial seguence.
pIK; protein tyrosine kinase; catalytic domain; c-kit; megakaryocyte;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                528 TCTGGCCCATCTTCTTCTGCCGCTCTCGGAGAAGCICTCTCAGGGGTGCCTTGGCTTTGT 569
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 oligonucleotide primers: a first set which ampilities all pTK DNA segments (049743-44), and a second set which amplifies highly conserved sequences present in the catalytic domain of the c-kit subgroup of pTKs (049745-65). The PTK genes identified are described in 049747-57 and R41897-02.

The LPTKs are expressed in lymphocytic cells, as well as megakaryocytic cells. Sequencing of LPTK-4 revealed the sequences given in 049751 and 049751.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   0; Gaps

Growth regulatory protein cNNA, GRP-5', isolated using Hel-Nl.
Growth regulatory protein cNNA, GRP-5', isolated using Hel-Nl.
Human, neurou-specific protein, Hel-Nl, 3'-UTR instability sequence;
paraneoplastic sensory neuropathy; oncoprotein; lymphokine; rat: elav;
RNA recognition motif; RRM; Drosophia; cellular growth; localisation;
instability, translatability, neurons, autoimmune protein, FE. FCD: PSN;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Against antibodies which activate specific protein tyrosine kinase(s) - also activate chimeric proteins of kinase extracellular domain and ye constant domain, useful for studying, and therapeutic modulation of cell growth and differentiation bisclosure; Page 58-59, 125pp; English.

DNA probes based on protein tyrosine-kinase (pfK) sequences were used partial sequence (T03099) was isolated from a lymphocytic cell library. The partial sequence can be used to identify other new pTK genes, or to design drugs, peptides or antisense constructs that modulate pTK activity, 95-A; 106 C, 123 G, 77 T;

PUT Product of CDMA library for related proteins - by screening total cell
menn with RNA-binding protein Hel-NI or Hel-N2
Disclosure: Column 24-30: 65pp: English.

PT Production Column 24-30: 65pp: English.

PT Sequences given in T34454-74 represent growth regulatory protein
cDNA's which were isolated due to their ability to bind to the human
conservor specific protein. Hel-NI. The mRNA sequences corresponding to
neuron-specific protein, Hel-NI. The mRNA sequences corresponding to
these cDNA's all contained the characteristic short stretches of
neighblates found in the random RNA selection experiments (see also
trighlates found in the random RNA selection experiments (see also
trighlates found in the random RNA selection experiments (see also
trighlates found in the cDNA's isolated represented growth
countries in relading the Ark nonreceptor tyrosine kinase, the
strowth requiatory protein. No house keeping or non-growth related genes
were detected. Hel-NI was found to contain 3 RNA recognition motifs
contain stransfected into cells, the cells undergo rapid growth.

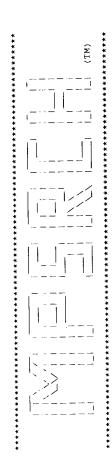

Commain is transfected into cells, the cells undergo rapid growth.

Hel-NI binds as a multimer along the mRNA, presumably enhancing its
contains instability and/or regalation for the contains for the center.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   0

                     Site_2: Drail (GACCAIGTS) iste_1. Liaili (CACTSISTS).
Site_2: Drail (GACCAIGTS): Ist strand cDNA was primed with an eligo(dT) primer (ATGSSCTITITITITITITITITITITICAL double-stranded cDNA was ligated to a Draili adaptor (TGTTGGCCTANGTGS). Algasted and cloned into distinct Draili sites of the pME18S-FL3 vector (5' site CACTGTGTS, 3' site CACATGTS). NAVIS should be used to isolate the cDNA insert. Size selection was performed to exclude flagments (University of Tokyo Institute of Medical Science). Custom primers for sequencing: 5' end primer CTTGTGCTGTAAAGGTGGG and 3' end primer

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 /db_xref="taxon:9606"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        180 d
